

WARM SEASON POLLINATOR MIX

ABOUT

Our Warm Season Pollinator Mix include over 20 flowering plants to attract beneficial insects. For every yield robbing pest there are 1,700 other insects that are beneficial. This diverse mix is designed to attract those insects and serve as an excellent food source throughout the summer. The variety of different colors in flowers will attract many different insects benefiting both the plant and the soil. This unique blend of native flowers, annual grains, and flowering brassicas will flower all summer long. If you want to promote life in your field by importing thousands of new inhabitants, this mix is for you!
